History of the Lemongrass

—History of Lemon Grass—

Lemongrass is a perennial grass of the Gramineae perennial family and is said to have been cultivated in a greenhouse in Japan in1914 (Taisho era 3). Presently, it is rooted in Japan not only in farms but also in kitchen garden. It looks a lot like rice and Japanese pampas grass but the scent resembles of lemon with a fresh and powerful scent and a refreshing taste. The origin is traditional Indian medicine and has a long history of being in use. Essential oils have been used to reduce fever and cure infections and stop tumor progression. The name is known as "Tumana Pourou (red stem)" because the root of the stem turns red.
